

**SOMESHWARA  
GROUP**

# **SOMESHWARA TRADING CORPORATION**

---

## **COMPANY PROFILE**

Founded in 1990, Someshwara Trading Corporation is one of the global leaders in cement technology.

Besides being a leading supplier of cements, aggregates, Fertilisers, and Plastring Sands, we also offer consulting, research, trading, engineering and other services to complement our customers' business needs.

# ABOUT US

**Someshwara Group was founded in the year 1990. Since then it has emerged as an manufacturing industry pioneer and leader in the field of Cements manufacturing, Aggregates Manufacturing, Fertiliser Manufacturing and Plastring Sands.**

**We deliver these products with extra care and attention under the monitoring of our professionals by following industrial quality norms and standards. As we are dealing with such products, we have adopted environmental friendly methods to lessen power consumption and also have a fluctuation controlling power.**

we have grown organically by developing in-house expertise and capabilities, across the entire value chain in the cement industry. All our cement plants are equipped with state-of-the-art technology, enabling the company to deliver the superior quality products.

vision is to have a healthy and sustainable community by keeping the balance of nature by reducing water pollution and keeping the soil fertile.

We focused on keeping nature alive and help farmers address key issues encountered in current farming methods. We are also focused on manufacturing products that support organic cultivation and constantly helping farmers increase the nutritional value of crops and increase the yield.

We have an excellent team who are trained to understand your business needs; offer the most suitable products and even customize wherever possible to ensure that you get the best results.

We are always happy to answer any of your queries. Please feel free to contact us on:

# CEMENT

- PANYAM CEMENTS
- SRINIDHI GOLD CEMENTS

Cement is a binder that's used to produce concrete. There are various types of cement for use in different applications. The properties of cement can also be varied through additives. Find out more about how we make our cement.

We are constantly finding innovative ways to improve our cement production process to better deliver solutions and products. The reason is simple: we believe in creating value and addressing our clients' needs in today's ever-changing business climate. Our goal is to be the industry leader in innovation and technology, and contribute to building livable urban landscapes.

# PLATRING SAND

- P SAND
- C SAND

Act now, and ask your engineers and contractors immediately because only a few engineers and contractors use high-quality sand, and the rest don't even care about the quality. Ultimately, it's your home; think responsibly and choose sand wisely.

Plaster Sand is a very fine grade of sand used for internal and external render, plastering and screeding. It creates a smooth and even finish and can be used for filling cracks. The Fineness Modulus of this sand is not less than 1.4.

## Key Benefits Of Plaster Sand

### Superior Workability

- The fine grains and consistent particle size of our plaster sand result in excellent workability, allowing for easy application and smooth finishing.

### Enhanced Adhesion

- Plaster sand is formulated to promote excellent adhesion between the plaster and the substrate, ensuring long-term durability and resistance to cracking.

### Consistent and Uniform Finishes

- With our plaster sand, you can achieve consistent plaster thickness and uniform finishes, enhancing the overall aesthetics of your construction projects.

# AGGREGATES

- M SAND
- 20 MM JELLY
- 40 MM JELLY
- 12 MM JELLY
- 6 MM JELLY

## M SAND

M Sand, or Manufactured Sand, is a type of sand that is produced by crushing rocks and stones to create sand-sized particles. It is an alternative to river sand and is used in construction activities to fulfill the increasing demand for sand for various applications. M Sand is often considered an eco-friendly and sustainable alternative to natural river sand. It's important to note that the terminology and specifications for sand types may vary by region, and local building codes or standards should be consulted for specific requirements related to M Sand.
